

Mambo and Joomla Stuff

Contributed by Ray Gilman
Thursday, 05 January 2006

This area contains introductions to the software I develop for Mambo and Joomla, and links to download or read more about that software.

Looking for Mambo / Joomla Stuff?

I've got some of that too. You can view my Mambo or Joomla downloads at my CMS Development Site. Been in operation since October 2003. Plus there's a new dev. site I'm working on called Mambotoys.com.

News Flash Scroller for Joomla and Mambo Content Management Systems. This product is designed to display your content items in a scrolling marquee. Jump to the scroller's download page.

The Today

In History program displays historical events that happened on this day in history. This software comes with around 3000 unique historical events (for FREE) that easily plug in with the aide of the advanced administration upload area. Get Today In History for your Mambo or Joomla CMS.

Once you have this installed you may need some additional events to display. Get additional volumes of historical events here.

Link

Exchange (LE - reciprocal manager) is designed to automate the process of reciprocating links. Originally designed for Mambo 4.5, but runs on newer versions and Joomla as well. Get more details and find download links for LE [here](#).

Web102

Template for the Joomla and Mambo CMS. Get more details and find download links for Web102 [template](#).
